

Hospital Bed

FACT SHEET FOR TRAINING & SAFETY

Safety

Hospital Bed

- + Plug the cord into a grounded outlet.
- + Keep cords, tubes, bedding, and body parts away from moving parts of the bed.
- + Keep the cord away from heated surfaces.
- + Be aware of open spaces around the side rails where body parts could be caught.
- + Use wheel locks to prevent the bed from moving.
- + Do not put your full body weight on a raised portion of the bed.
- + Be careful with liquids around the bed and its electric parts.
- + Push at the head or footboard to move the bed.

Trapeze

- + Check the hardware where the trapeze attaches to the headboard and tighten if needed.
- + Only use trapeze to help move in and out of bed. Don't use your full weight due to weight capacity.

How to Use

**Refer to the manufacturer's manual or website for more information about your equipment.*

1. Place a twin sheet on the mattress.
2. Using the hand crank or remote, raise the bed to a comfortable level to allow you to move in and out of the bed.
3. Keep the rails in an upright position while you are in the bed. Rails are not meant for restraint.
4. Use the hand crank or remote to elevate the head or foot of the bed to maximize comfort. Keep the crank available in case of power outage.

Bed Control

Adjust Headboard & Footboard

- + Press and hold the "Head" or "Foot" buttons to raise or lower the head or foot of the bed.

Adjust Bed Height

- + Press and hold the "Bed" buttons to raise or lower the height of the bed.

Cleaning

- + Always unplug the power cord when cleaning.
- + Never soak the electrical cord or hand control in liquid.
- + Wipe down the mattress cover, headboard, footboard, rails, trapeze, power cord, and hand control with a damp cloth.
